

## DATASHEET

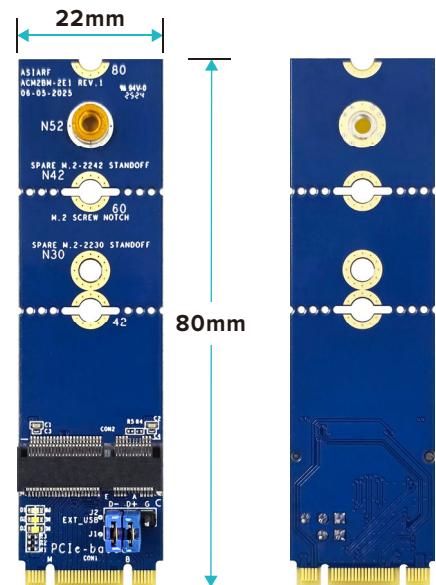

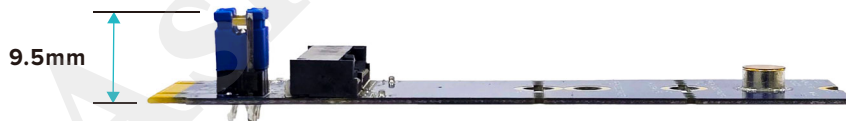

# M.2 B+M Key to M.2 E Key Adapter ACM2BM-2E1

## Description

The **M.2 B+M Key to M.2 E Key Adapter** allows devices with an M.2 B/M Key interface (commonly used for NVMe SSDs or WWAN modules with PCI signal) to be connected to a host with an M.2 E Key slot (typically used for Wi-Fi, Bluetooth, and other wireless modules). This adapter is ideal for systems that only provide an E Key slot but require support for storage or WWAN modules.

The USB signal required by Bluetooth can come from the B/M slot or be introduced externally.

## Feature

- **High-quality PCB** for stable signal transmission
